

Operations Review 2026

Example Widgets Inc. runs two plants that assemble sensors for industrial customers. This review covers the year to date.

The north plant expanded its manufacturing floor by a third and hired forty new technicians.

The south plant focused on quality. Defect rates fell from 1.2% to 0.7% after the new inspection line went live in April.

Shipping volumes grew in every region except one, where a customs delay held orders for two weeks.

Plant metrics

- Output: 48,000 units
- Overtime: down 15%
 - Weekend shifts cut to two

Staffing held steady at 310 people across both sites.

Energy use per unit dropped by a tenth after the compressor upgrade in the north plant.

Water use was flat.

Outlook

The second half plan adds a third shift at the south plant and a new supplier for housings.

Capital spending stays within the approved budget of 4.2 million dollars for the year.
